From the PublisherWhy this book is unique : ITCOOKBOOK readers have a need for information they can use right now. And our series of IT interview questions books is an answer to that need for instant information. Our books are written by IT practitioners and expert authors who have varied and vast experiences in the world of information technology. Rather than focusing on comprehensive, textbook-sized or voluminous reference guides, ITCOOKBOOK includes only the information that can be used immediately by the reader in their job search or IT career. In this regard, the books are much shorter, and this is the overwhelming preference of our readers. Rather than providing more information, our books focus on providing the right information. ITCOOKBOOK Interview Question books can also be thought of as "cook books" in the traditional sense in that they provide the reader information in a very concise and useable manner, not unlike a recipe. In this way we hope we serve our readers by saving them time - by helping or readers understand what is important, and what they can safely ignore. For instance, you might find our books particularly useful for gaining knowledge and understanding of a completely unfamiliar area of IT. By skimming the table of contents and index, you may quickly understand the most important aspects of a particular area, and also have access to the accumulated knowledge of our expert authors. It is the unique "Question and Answer" nature of the books that make them so valuable. It can be said that, "If you can't find the right answers, maybe you're not asking the right questions..." Our books not only help the reader understand the answers, by providing explanations where applicable but also provide the right questions. Our books also include code listings and command references which set them apart - and keep them close at hand at work rather than collecting dust on the shelf. Finally, ITCOOKBOOK books are published with several goals in mind which we believe set them apart from other sources of information. Our mission is to provide the reader with timely, useful information that will increase their technical literacy, increase the awareness of careers in information technology, and challenge our readers to question the status quo. All of our authors are IT professionals - and we know that our books offer a great deal of value to our readers - we hope you find them as useful as we do!
