Andrew J. Donnelly, Francesca E. Cunningham, Verna L. Baughman : Anesthesiology Critical Care Drug Handbook: 1999-2000 (Lexi-Comp's Clinical Reference Library) before purchasing it in order to gage whether or

not it would be worth my time, and all praised Anesthesiology Critical Care Drug Handbook: 1999-2000 (Lexi-Comp's Clinical Reference Library):

9 of 9 people found the following review helpful. A perfect book to have during residency. By A Customer This is a must-have for anesthesia residency. It contains complete information not only for po/iv drugs, but inhalation agents as well. In addition, the book has appendices that cover additional information in condensed form for easy reference (categorized drugs and their affect on local, general or regional anesthesia, tables of all anesthetics with their chemical and physical properties, flow-graphs of ACLS and other protocols. If I could carry only one book (beside Morgan and Mikhail) this would be it.

...includes updated monographs, appendices, new drugs, and new sections on anesthesia considerations for neurosurgery, perioperative management of the diabetic patient, and anesthesia for the geriatric patient.
