High-powered car audio systems are very popular with today's under-30 generation. These top-end systems are merely a component within the vehicle's audio system, much as your stereo receiver is a component of your home audio and theater system. Little has been written about the troubleshooting and repair of these very expensive automotive audio systems. Homer Davidson takes his decades of experience as an electronics repair technician and demonstrates the ins-and-outs of these very high-tech components.

About the AuthorHomer Davidson is the best-selling author of over 50 titles for electronics technicians and engineers. The author of SMD Electronics Projects from Prompt, he is well placed to offer advice on troubleshooting given his world of experience.
