They are a great learning toolBy alexI bought as many of the books from this series as I could for nostalgia purposes, as I used to look at them at the library when I was a kid. They are a great learning tool, and I actually can't find a modern book series that accomplishes the same goals of teaching detailed information about a variety of species in a kid friendly manner, but the information has become a bit dated by now.

This volume contains detailed information about all species of birds equally at home in two environments: the air and water. Penguins, cormorants, ducks, cranes, gulls and swans are amongst the 900 species which occupy every type of water habitat described in the text.
